Project plan

Problem Definition:

The problem (main problem):

There are two main problems. First one is that a lot of students suffering to find their inclinations and spend long time trying many things in hope they can find it which means lost time and effort sometimes for nothing. Secondly, is even if they know what they want or already they found their inclinations they still can't practice and get more experience in it so, they get lack of information about what they tend about.

2-(sub problems):

- 1- Sometimes there is no free time for students to look for their inclinations.
- 2- There are (unsocial) students so they can't join people to improve themselves.
- 3- Problems with time management.
- 4- Lack of equipment.
- 5- Inability to attend.
- 6- Some dangerous stuff.

Scope Objectives of “new system”:

“Advanced Flexible Edutainment (AFE)”

The goal of this system is to provide students with a private space away from academic pressure's to practice things they are interested .

The general concept is a system that combines education and entertainment by forming clubs for different hobbies and tendencies that students prefer.

Alternative Solutions

1- instead of creating a stand alone application we might extend “Madrasti”

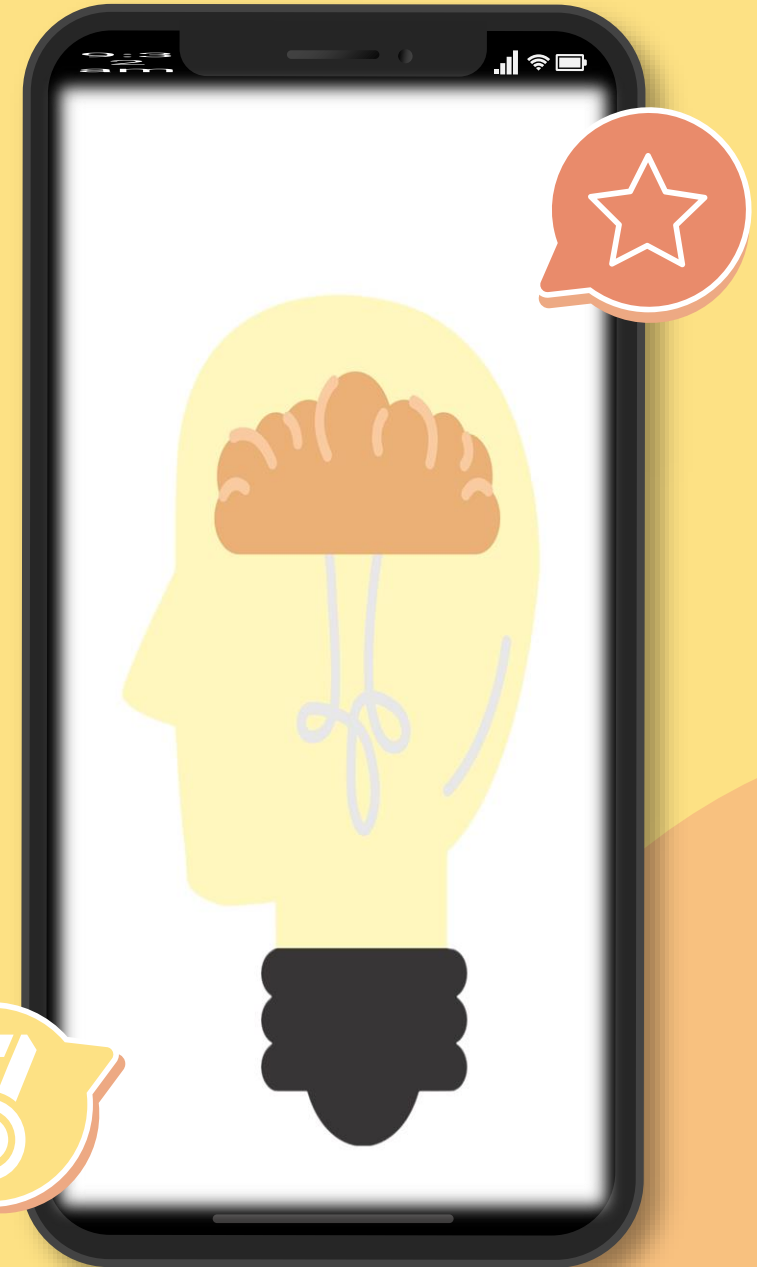

2- instead of developing an application we might make it a website

Software impacts:

- 1-Diversity in themes and presentation
- 2-A flexible space in sharing opinions and supporting them in developing their hobbies and providing advice that suits each student
- 3-The application will affect student positively because it will make them learn in an interesting way so that they can participate in a competitions and get to know people share the same interests with them
- 4-Student in the past have nothing to do in their free time ,the application will help them To do something they enjoy doing it
- 5-They application will give school students the ability to compete in the national and international competitions if they are a member from a certain club in their school.

Potential Changes in the Organization:

1-The program will help increase students' knowledge in their specific fields

2-It will enhance the social aspect of students to create a socially open generation

3-Students will always be ready to try new things because it will be available for them

4-We will see a lot of school students competing in national competitions

Recommended Alternative of the course of Action:

1-The best alternative is to extend the application “Madrasti “

2-Make a website as an alternative to the application.

3-Traditional alternatives, such as applying the idea to the
school system

4-The idea is adopted and becomes a part of the student
activities or classes.
